Title :

the Impact of the practicing on improving English speaking skills among primary school students in the higher grades of the fifth school in Abha .

Description:

The English language is considered as a major obstacle to achieving goals and aspirations due to the bleak picture and frustration among English learners. I found it to be attributed to many reasons that start at very early age because of some parents' and teachers' behaviors.

Based on my personal experience in teaching English, the aim of this study is to attempt to develop the speaking skills among students in upper elementary grades, which will eventually improve the process of learning English and find solutions for students with limited language skills.

Tools and Methodology:

The research will be conducted on a group of English teachers and a group of students from upper elementary grades at the Fifth Elementary School in Abha. The main tool for this research is questionnaires for both teachers and students. To obtain clear and precise answers, the conventional teaching methods will be applied to one group of students, and an innovative approach to approach to enhance English speaking skills will be used for the second group of students.
