## (A) Reading Comprehension 1: Read the following passage and answer the questions (A) Reading Comprehension 1: Read the following passage and answer the questions (الله عنون المنافع المنافع

Marriage is often not easy. Maybe man and woman love each other, but they <u>argue</u>. They get angry. Later they apologize, but it happens again and again. What's the problem? Are men and women really very different.

Deborah Tannen says yes, men and women are very different. Tannen teaches at Georgetown University in Washington, D.C. <u>She</u> writes books about the ways people talk. She believes that men and women talk- and think- in different ways. She tells about some differences in her book, You Just Don't Understand.

The differences, Tannen says, begin when men and women are children. Very young boys and girls are similar to each other. In other words, they like many of the same things and play in the same ways. They aren't very different. But then there is a change. When children in the United States are five or six years old, boys usually play in large groups. One boy gives orders. For example, he says," Take this," 'Go over there". He is the leader. Boys also brag. In other words, they say good thing about themselves. But girls there usually play in small groups or with one other girl. A girl's best friend is her very good friend and important to her. Girls often don't give orders; they give suggestions.

2: B: Reading Comperhension القطعة تتحدث عن نبات الصبار الصحراوي

The cactus is a plant which grows in very hot, dry places. They do not have leaves. Instead, <sup>61</sup>they have spiny needles which stick out of their stems. There are many shapes of the cactus. <sup>66</sup>Some are small and round. <sup>64</sup>Others are tall like columns or pillars. Some are shaped like tubes or bells. Some are shaped like wheels. Some grow as trees or shrubs. Others grow as ground cover. Cactus flowers are big, <sup>66</sup>and some of them bloom at night. Their flowers come out at night because they are pollinated by insects or small animals that come out at night. <sup>68</sup>Insects and small animals carry pollen from one cactus to another.

<sup>67</sup>Most cacti live in North and South America. Others live in Africa, Madagascar, and Sri Lanka. Cacti do not have very large leaves because large leaves would allow the water to evaporate. When water evaporates, <sup>62</sup>it changes from a liquid to a gas. When it becomes a gas, it is light

enough to move through the air. That would be bad for the cactus because the cactus needs the water to live.

Some cacti have waxy coatings on their stems, <sup>65</sup>so that water will run down the stem to the roots. <sup>63</sup>Cacti can absorb water from fog in the air, since it does not rain very much in the desert. Most cacti have long roots which can spread out close to the surface so they can absorb a lot of water on the occasions when it rains.

Families in almost every country are changing. This is true in rich <sup>20</sup>countries and poorones. It is true in Africa, the Americas, Asia and Europe. All over the world, families are getting smaller.

In North Africa, in the past, many people lived in extended families. Fifty to hundred people lived together in a group of houses.

These were all family members- grandparents, aunts, uncles, cousins, children, and grandchildren. But now this traditional family is <sup>17</sup>breaking into smaller groups.

The traditional family in Mexico was also big. One generation ago, the average <sup>19</sup>Mexican woman had <sup>21</sup>seven children. Today, <u>she</u>has an average of only 2.5 children. Now, without so many children, families don't need to spend so much money on <sup>18</sup>basics, such as food, clothing and housing.

My name is Elena Sanchez. I am from Mexico, but now I live in California. I'm a student <a href="https://example.com/here">here</a> in English language classes at a small college. I live in an apartment building. It's on the corner of Olive Street and Sycamore Avenue. My address is 2201 Olive Street. There's a big olive tree in front of the building. There's a park across the street. There are a lot of oak trees in the park. The trees are beautiful in the summer. A lot of my neighbors are from different countries. The people next to me are from Indonesia. The family across from the Indonesian family is from Colombia. The stores in this neighborhood are always busy. There's a Korean drugstore. There are three restaurants on Olive Street: One Mexican, <a href="mailto:one">one</a> Japanese, and one Moroccan-Italian-American. I like my neighborhood, but I ask myself one question. Where are the Americans?!!!

Yellowstone National Park is in the U.S. states of Wyoming, Idaho, and Montana. It became the first National Park in 1872. There are geysers and hot springs at Yellowstone. There are also many animals at Yellowstone. There are elk, bison, sheep, grizzly bears, black bears, moose, coyotes, and more. More than 3 million people visit Yellowstone National Park each year. During the winter, visitors can ski or go snowmobiling there. There are also snow coaches that give tours. Visitors can see steam (vapor water) come from the geysers. During other seasons, visitors can go boating or fishing. People can ride horses there. There are nature trails and tours. Most visitors want to sec Old Faithful, a very predictable geyser at Yellowstone. Visitors can check a schedule to see the exact time that Old Faithful is going to erupt. There are many other geysers and boiling springs in the area. Great Fountain Geyser erupts every 11 hours. Excelsior Geyser produces 4,000 gallons of boiling water each minute! Boiling water is 100 degrees Celsius, or 212 degrees Fahrenheit — that's very hot! People also like to see the Grand Prismatic Spring. It is the largest hot spring in the park. It has many beautiful colors. The beautiful colors are caused by bacteria in the water. These are forms of life that have only one cell. Different bacteria

live in different water temperatures. Visiting Yellowstone National Park can be a week—long vacation or more. It is beautiful, and there are activities for everyone.

**Pulp Friction** 

Every second, 1 hectare of the world's rainforest is destroyed. That's equivalent to two football fields. An area the size of New York City is lost every day. In a year, that adds up to 31 million hectares -- more than the land area of Poland. This alarming rate of destruction has serious consequences for the environment; scientists estimate, for example, that 137 species of plant, insect or animal become extinct every day due to logging. In i3ritish Columbia, where, since 1990, thirteen rainforest valleys have been clearcut, 142 species of salmon have already become extinct, and the habitats of grizzly bears, wolves and many other creatures are threatened. Logging, however, provides jobs, profits, taxes for the government and cheap products of all kinds for consumers, so the government is reluctant to restrict or control it Much of Canada's forestry production goes towards making pulp and paper. According to the Canadian Pulp and Paper Association, Canada supplies 34% of the world's wood pulp and 49% of its newsprint paper. If these paper products could be produced in some other way, Canadian forests could be preserved. Recently, a possible alternative way of producing paper has been suggested by agriculturalists and environmentalists: a plant called hemp.

the worst

Marriage is often not easy. Maybe man and woman love each other, but they <u>argue</u>. They get angry. Later they apologize, but it happens again and again. What's the problem? Are men and women really very different.

Deborah Tannen says yes, men and women are very different. Tannen teaches at Georgetown University in Washington, D.C. <u>She</u> writes books about the ways people talk. She believes that men

مكتبة فجر – الدمام مقابل كليه البنات – ت / ٣٨٤١٣٤٢٩ **. دعواتكم اخوكم هتان** 

and women talk- and think- in different ways. She tells about some differences in her book, You Just Don't Understand.

The differences, Tannen says, begin when men and women are children. Very young boys and girls are similar to each other. In other words, they like many of the same things and play in the same ways. They aren't very different. But then there is a change. When children in the United States are five or six years old, boys usually play in large groups. One boy gives orders. For example, he says," Take this," 'Go over there". He is the leader. Boys also brag. In other words, they say good thing about themselves. But girls there usually play in small groups or with one other girl. A girl's best friend is her very good friend and important to her. Girls often don't give orders; they give suggestions.
